

LNG ENGINEERING & CONSTRUCTION EXPERIENCE

Interface Consulting provides arbitration, litigation, claims, and construction management expert services as well as construction advisory services on LNG (liquefied natural gas) projects around the globe. Interface's consultants have broad experience in both LNG project execution, spanning the entire project life from early concept and FEED studies to construction completion and start-up activities, and the dispute resolution process. Interface is familiar with small-, mid-, and large-scale LNG process technology and is experienced with other key aspects of LNG project development, such as cryogenic specifications, gas field development, feed gas pipelines, design and construction of liquefaction trains, modularized fabrication techniques and locations, and the construction of LNG storage tanks and condensate tanks. Interface Consulting has assisted owners, engineers, EPC contractors, subcontractors, and attorneys on numerous LNG projects, including the following:
